

MANUAL FOR QUADLINE

Hey!!! Thank you for downloading our game Quadline that offers you an opportunity to reexperience your childhood. Our game is an adaptation of the world-renowned game of Connect4.

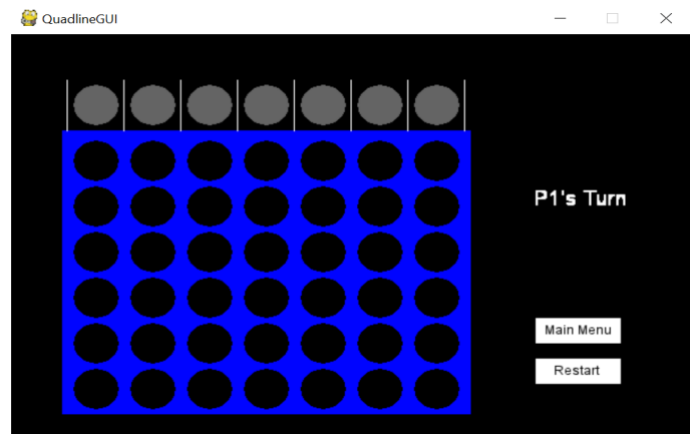

Run the main file Quadline.py to launch the game. Once you execute the file you will see this window. The yellow button Play will allow you to play the two-player game. After pressing the button, you will see a blue grid that represents the

traditional Connect4 board game. The two players of the game are represented using the yellow and red tokens.

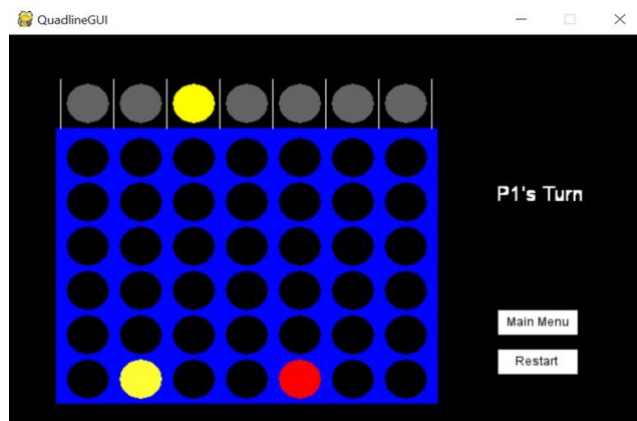

Rules:

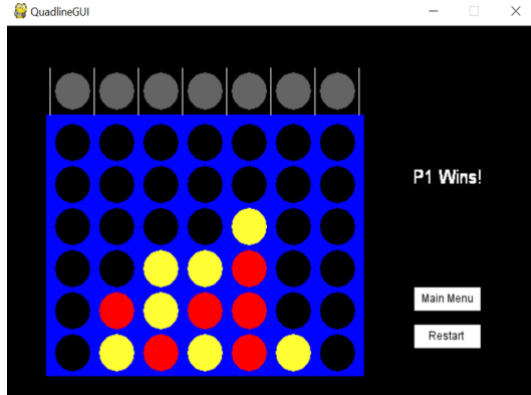

- One player can only make one move during his turn.
- The first player to connect four tokens in any possible direction will win the game.

To move, press on the circles above the grid. Once you click on the

token, the token will get placed at the lowest possible position in the column.

Once the game ends, you'll see a screen similar to this that portrays the player who has won the game. To restart the game, click the restart button. In order to go back to the Main Menu, press on the Main Menu button.

We hope you have a great time while playing our game. Please give us feedback on quadline.while1999@gmail.com and help us to improve the game.
